
Project Overview

The Task Manager is a full-stack web application that helps users efficiently manage their tasks. It allows users to add tasks with titles and categories, view all tasks, and mark them as completed. The application uses React for the frontend and FastAPI with SQLite for the backend. Tasks are stored persistently, and the interface is responsive and user-friendly.

Project Repository

The complete project code is available on GitHub at the following URL:

Steps to Run Backend & Frontend

Backend

1. Open a terminal and navigate to the backend folder:

```
cd backend
```

2. Create a virtual environment:

```
python -m venv venv
```

3. Activate the virtual environment:

- Windows:

```
venv\Scripts\activate
```

- macOS/Linux:

```
source venv/bin/activate
```

4. Install the dependencies:

```
pip install -r requirements.txt
```

5. Start the server:

```
uvicorn main:app --reload
```

The backend will run at <http://localhost:8000>

Frontend

1. Open a new terminal and navigate to the frontend folder:

```
cd frontend
```

2. Install dependencies:

npm install

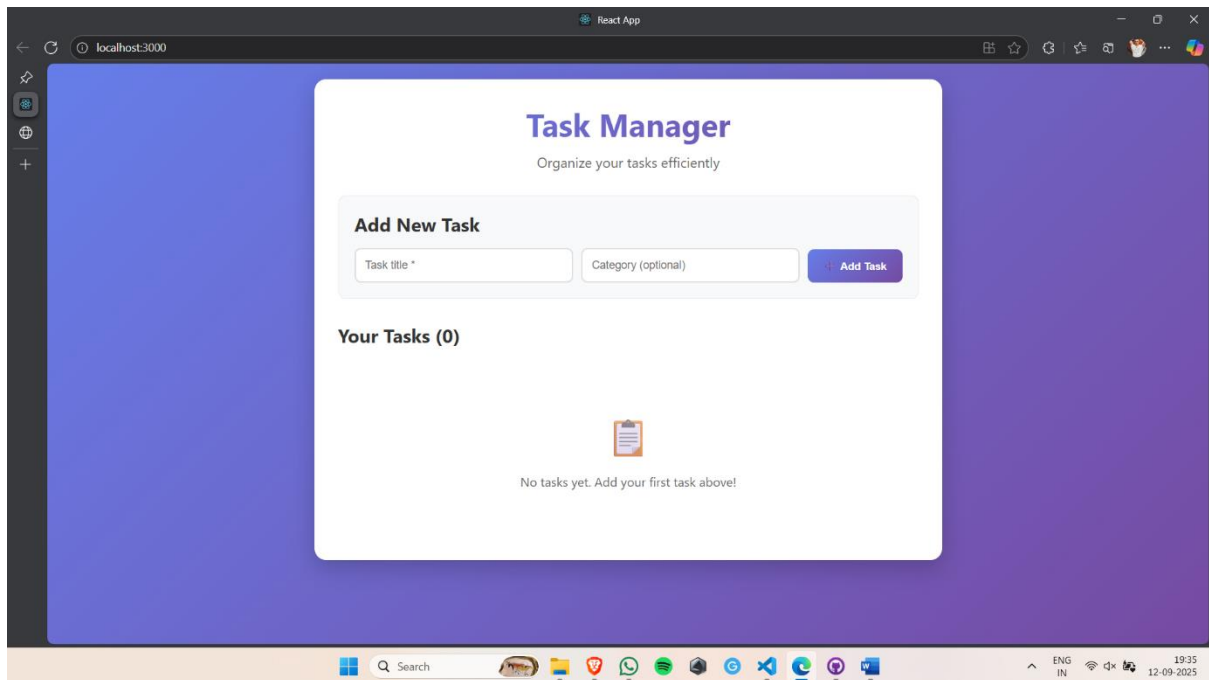

3. Start the React development server:

npm start

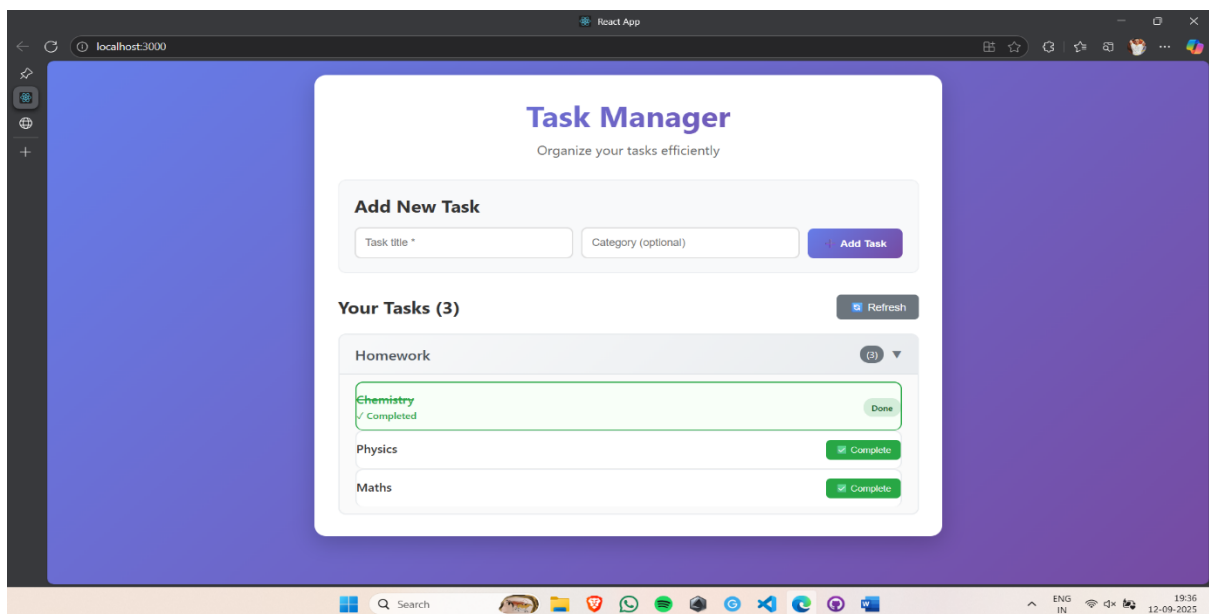

The frontend will run at <http://localhost:3000>
